No part of this publication may be reproduced or transmitted in any form or by any means, electronic or mechanical, including photocopy, recording, or any information storage and retrieval system, without permission in writing from the copyright owner.

The appearance of the code at the bottom of the first page of an article in this journal indicates the copyright owner's consent that copies of the article may be made for personal or internal use, or for the personal or internal use of specific clients. This consent is given on the condition, however, that the copier pay the stated per copy fee through the Copyright Clearance Center, Inc. (27 Congress Street, Salem, Massachusetts 01970), for copying beyond that permitted by Sections 107 or 108 of the U. S. Copyright Law. This consent does not extend to other kinds of copying, such as copying for general distribution, for advertising or promotional purposes, for creating new collective works, or for resale. Copy fees for pre-1986 articles are as shown on the article title pages; if no fee code appears on the title page, the copy fee is the same as for current articles.

MADE IN THE UNITED STATES OF AMERICA

CONTENTS OF VOLUME 247

NUMBER 1, MAY 15, 1986

INVITED PAPER

- Biological Effects of the Superoxide Radical *Irwin Fridovich* 1

COMMUNICATION

- The Nucleotide Sequence of Two Homogeneous *Drosophila melanogaster* tRNA^{Tyr} Isoacceptors: Application of a Rapid tRNA Anticodon Sequencing Method Using S-1 Nuclease
Beat Suter, Martin Altwegg, Yves Choffat, and Eric Kubli 233

BIOLOGICAL OXIDATIONS AND BIOENERGETICS

- Endogenous Energy Supply to the Plasma Membrane of Dark Aerobic Cyanobacterium *Anacystis nidulans*: ATPase-Independent Efflux of H⁺ and Na⁺ from Respiring Cells
W. W. A. Erber, W. H. Nitschmann, R. Muchl, and G. A. Peschek 28
- Exogenous Energy Supply to the Plasma Membrane of Dark Anaerobic Cyanobacterium *Anacystis nidulans*: Thermodynamic and Kinetic Characterization of the ATP Synthesis Effected by an Artificial Proton Motive Force
G. A. Peschek, B. Hinterstoisser, M. Riedler, R. Muchl, and W. H. Nitschmann 40
- The Control of Malate Dehydrogenase Activity by Adenine Nucleotides in Purified Potato Tuber (*Solanum tuberosum* L.) Mitochondria
Pierre Rustin and Michel Valat 62
- Identification of Myeloperoxidase in Human Colostrum
Kazuya Hashinaka and Michiyuki Yamada 91
- Xanthine Oxidase from Human Liver: Purification and Characterization
Thomas A. Krenitsky, Thomas Spector, and Willard W. Hall 108
- Purification and Properties of the Membranal Thiol Oxidase from Porcine Kidney
Lawrence H. Lash and Dean P. Jones 120

ENZYME MECHANISMS AND METABOLISM AND COENZYMES

- Formation of Dimethyl Selenide and Trimethylselenonium from Selenobetaine in the Rat
Stephen J. Foster, Richard J. Kraus, and Howard E. Ganther 12
- Pyrimidine Nucleoside Monophosphate Kinase from Rat Bone Marrow Cells: Chromatographic, Electrophoretic, and Sedimentation Behavior of Active and Inactive Enzyme Forms
Jeanclaire Seagrave and Philip Reyes 76
- Purification and Inactivation-Reactivation of Phosphorylase Phosphatase from the Protein-Glycogen Complex
Emma Villa-Moruzzi 155

MEMBRANES, CELL SURFACES, AND RECEPTORS

- Structure-Function Investigations of the Membrane (Na⁺ + Mg²⁺)-ATPase from *Acholeplasma laidlawii* B: Studies of Reactive Amino Acid Residues Using Group-Specific Reagents
Ruthven N. A. H. Lewis, Rajan George, and Ronald N. McElhaney 201

MOLECULAR GENETICS, DEVELOPMENTAL BIOCHEMISTRY, AND DIFFERENTIATION

- Biosynthesis and Fate of Proteoglycans in Cartilage and Bone during Development and Mineralization
Meng-Yu Tian, Masaki Yanagishita, Vincent C. Hascall, and A. H. Reddi 221

PHYSICAL BIOCHEMISTRY

- Physicochemical Studies of Processes Involving Potential Photodynamic Drugs on Route to Their Targets: Self-Aggregation and Membrane-Binding of Zn-Hematoporphyrin
Smadar Cohen and Rimona Margalit 57
- Oxygen-17 and Deuterium Nuclear Magnetic Resonance Studies of Lysozyme Hydration
T. S. Lioutas, I. C. Baianu, and M. P. Steinberg 68

PLANT BIOCHEMISTRY AND PHOTOSYNTHESIS

- Characterization of O₂ Evolution by a Wheat Photosystem II Reaction Center Complex Isolated by a Simplified Method: Disjunction of Secondary Acceptor Quinone and Enhanced Ca²⁺ Demand
Masahiko Ikeuchi and Yorinao Inoue 97
- Interaction of Ferredoxin with Ferredoxin:NADP Reductase: Effects of Chemical Modification of Ferredoxin
Barbara J. Vieira and Danny J. Davis 140

PROTEIN STRUCTURE AND FUNCTION

- Characterization of Cat Insulin
Gunnel Halldén, Guro Gafvelin, Viktor Mutt, and Hans Jörnvall 20
- A Calcium Binding Protein from *Drosophila melanogaster* Which Activates cAMP Phosphodiesterase: Comparison of This Protein with Porcine Brain Calmodulin
F. Wandosell, L. Serrano, and J. Avila 147
- Structural Studies and Two-Dimensional Gel Electrophoresis of γ -Glutamyl Transpeptidase
James L. Cone, Irene B. Glowinski, Peter J. Wirth, Preston H. Grantham, and Peter P. Roller 165
- Proton Nuclear Magnetic Resonance Studies of Soybean Lectin-Monosaccharide Interactions: Computer Analysis of Complex Binding Behavior
Caroline Preston and Jonathan M. Preston 190

PROTEIN SYNTHESIS AND POST-TRANSLATIONAL PROCESSING

- Pyruvate Kinase and Total Protein Are Regulated Differently during Growth of P-815 Mastocytoma Cells
Julie-Lani Ngo, Robert A. Orlando, and Kenneth H. Ibsen 171
- Protein Transport in Intact, Purified Pea Etioplasts
Christine Schindler and Jürgen Soll 211

REGULATION OF METABOLISM AND OF ENZYME ACTION

- Regulation of Neutral Cholesteryl Esterase in Arterial Smooth Muscle Cells: Stimulation by Agonists of Adenylate Cyclase and Cyclic AMP-Dependent Protein Kinase
David P. Hajjar 49
- Modulation by Basic Polypeptides of ATP-Induced Activation of Tyrosine Hydroxylase Prepared from Bovine Adrenal Medulla
Kyoji Morita, Atsushi Nakanishi, Hitoshi Houchi, Motoo Oka, Kazuhiko Teraoka, Kazuo Minakuchi, Shuichi Hamano, and Yoshihiro Murakumo 84

Purification and Characterization of Purple Acid Phosphatase from Developing Rat Bone	<i>Thomas R. Anderson and Svein U. Toverud</i>	131
The Role of Mitochondrial Glutathione and Cellular Protein Sulfhydryls in Formaldehyde Toxicity in Glutathione-Depleted Rat Hepatocytes	<i>Robert H. Ku and Ruth E. Billings</i>	183

NUMBER 2, JUNE 1986

BIOLOGICAL OXIDATIONS AND BIOENERGETICS

Participation of Liver Aldehyde Oxidase in Reductive Metabolism of Hydroxamic Acids to Amides	<i>Kazumi Sugihara and Kiyoshi Tatsumi</i>	289
Modification of Bovine Heart Succinate Dehydrogenase with Ethoxyformic Anhydride and Rose Bengal: Evidence for Essential Histidyl Residues Protectable by Substrates	<i>Lars Hederstedt and Youssef Hatefi</i>	346

ENZYME MECHANISMS AND METABOLISM AND COENZYMES

The Presence of Desulfo Xanthine Dehydrogenase in Purified and Crude Enzyme Preparations from Rat Liver	<i>Tadashi Ikegami and Takeshi Nishino</i>	254
Acetylcholinesterase: Theory of Noncompetitive Inhibition	<i>Harry C. Froede, Irwin B. Wilson, and Herman Kaufman</i>	420
Partial Purification and Characterization of Protein Tyrosine Kinases from Normal Tissues	<i>Sergei Braun, Mossaad Abdel Ghany, Jerry A. Lettieri, and Efraim Racker</i>	424

GLYCOPROTEINS AND GLYCOLIPIDS

The Solution Structure of Mucous Glycoproteins: Proton NMR Studies of Native and Modified Ovine Submaxillary Mucin	<i>Thomas A. Gerken</i>	239
Purification and Properties of Glucosidase I from Mung Bean Seedlings	<i>T. Szumilo, G. P. Kaushal, and Alan D. Elbein</i>	261
Glucosylceramide in the Androgen-Responsive Kidney of the Lizard <i>Anolis carolinensis</i>	<i>Sonja K. Gross, Robert H. McCluer, and Louis N. Irwin</i>	446

LIPIDS AND PROSTAGLANDINS

Requirement of Glucose for Mycolic Acid Biosynthetic Activity Localized in the Cell Wall of <i>Bacterionema matruchotii</i>	<i>Takashi Shimakata, Kimiko Tsubokura, and Takashi Kusaka</i>	302
Alkylacetylgllycerophosphocholine Effects on the Metabolism of Phospholipids in Rabbit Platelets: Effects of Extracellular Ca^{2+} and Prostacyclin	<i>Akira Tokumura, William Kramp, and Donald J. Hanahan</i>	403

MEMBRANES, CELL SURFACES, AND RECEPTORS

Abnormal Membrane Properties of the Sarcoplasmic Reticulum of Pigs Susceptible to Malignant Hyperthermia: Modes of Action of Halothane, Caffeine, Dantrolene, and Two Other Drugs	<i>S. Tsuyoshi Ohnishi, Alan J. Waring, Shyh-Rong G. Fang, Kazumi Horiuchi, Jeffrey L. Flick, Kenneth K. Sadanaga, and Tomoko Ohnishi</i>	294
---	---	-----

- Role of Lipids in Sarcoplasmic Reticulum: A Higher Lipid Content Is Required to Sustain Phosphoenzyme Decomposition Than Phosphoenzyme Formation
Cecilia Hidalgo, Milton de la Fuente, and M. Elena Gonzalez 365

MOLECULAR GENETICS, DEVELOPMENTAL BIOCHEMISTRY, AND DIFFERENTIATION

- Transfer of Retinoic Acid from Its Complex with Cellular Retinoic Acid-Binding Protein to the Nucleus
S. Takase, D. E. Ong, and F. Chytil 328

OXYGENASES, MICROSOMES, AND P-450 REACTIONS

- Rat Hepatic Cholesterol 7 α -Hydroxylase: Biochemical Properties and Comparison to Constitutive and Xenobiotic-Inducible Cytochrome P-450 Enzymes
David J. Waxman 335
- Evidence for Induction of Hepatic Microsomal Cytochrome P-450 by Cimetidine: Binding and Kinetic Studies
Berardo Ioannoni, Steven R. Mason, Paul E. B. Reilly, and Donald J. Winzor 372

PHYSICAL BIOCHEMISTRY

- Examination of the Secondary Structure of the Kringle 4 Domain of Human Plasminogen
Francis J. Castellino, Vesna Sator de Serrano, James R. Powell, Walter R. Johnson, and John M. Beals 312
- Small-Angle X-Ray Scattering of High- and Low-Affinity Heparin
B. A. Khorramian and S. S. Stivala 384

PLANT BIOCHEMISTRY AND PHOTOSYNTHESIS

- Purification and Properties of the Cytoplasmic Glucose-6-Phosphate Dehydrogenase from Pea Leaves
K. Fickenscher and R. Scheibe 393
- Isolation and Characterization of Buckwheat (*Fagopyrum esculentum* M.) Chalcone Synthase and Its Polyclonal Antibodies
Geza Hrazdina, Eric Lifson, and Norman F. Weeden 414
- Comparison of Kinetic and Molecular Properties of Two Forms of Amygdalin Hydrolase from Black Cherry (*Prunus serotina* Ehrh.) Seeds
Gary W. Kuroki and Jonathan E. Poulton 433
- Isolation and Characterization of Multiple Forms of Mandelonitrile Lyase from Mature Black Cherry (*Prunus serotina* Ehrh.) Seeds
Robert S. Yemm and Jonathan E. Poulton 440

PROTEIN STRUCTURE AND FUNCTION

- Determination of Apo and Holo Retinoic Acid-Binding Protein Levels in Retinoid-Responsive Transformed Cells by High-Performance Size-Exclusion Chromatography
Huda E. Shubeita, Maitray D. Patel, and Anne M. McCormick 280
- Phylogenetic Conservation of Epitopes in Mammalian Aldose Reductase: Application to Immunoquantitation
Eric J. Mathur and Charles E. Grimshaw 321

Structural Relationship of the Heterogeneous Nuclear Ribonucleoprotein Core Polypeptides from Rat Liver Nuclei	
<i>Apostolia Guialis, Evangelia Jockers-Wretou, and Constantine E. Sekeris</i>	355

PROTEIN SYNTHESIS AND POST-TRANSLATIONAL PROCESSING

Induction of Mouse Epidermal Ornithine Decarboxylase by the Tumor Promoter 12-O-Tetradecanoylphorbol-13-Acetate: Dependence on Calcium Availability	
<i>Ajit K. Verma and Deborah Erickson</i>	272
AUTHOR INDEX FOR VOLUME 247	450

The Subject Index for Volume 247 will appear in the December 1986 issue as part of a cumulative index for the year 1986.

Instructions to Authors¹

Archives of Biochemistry and Biophysics is an international journal dedicated to the dissemination of fundamental knowledge in all areas of biochemistry and biophysics. **Short Communications** and **regular manuscripts** that contain new and significant information of general interest to workers in these fields are welcome. Sufficient detail must be included to enable others to repeat the work.

Short Communications offer a means of early publication of work of such importance that rapid publication is warranted. They should not exceed 15 double-spaced typed manuscript pages in length (including text, bibliography, tables, and figures). To expedite review and processing of communications, authors may send them directly to an Executive Editor most closely associated with the subject category of the communication. Communications sent to the Editorial Offices of the journal (see below) will be assigned to an Executive Editor.

Manuscripts should be written in clear, concise and grammatical English and should be submitted in quadruplicate (one original and three photocopies), including four sets of figures, to:

Archives of Biochemistry and Biophysics
Editorial Office
Seventh Floor
1250 Sixth Avenue
San Diego, California 92101

Failure to receive the required number of copies of the manuscript may delay review. All copies of halftone artwork *must* be glossy prints or originals; photocopies of halftones do not show sufficient detail to be used for the review process. *In the case of rejected manuscripts only one copy of the manuscript will be returned to the author.*

Original papers only will be considered. Manuscripts are accepted for review with the understanding that the same work has not been published, that it is not under consideration for publication elsewhere, and that its submission for publication has been approved by all of the authors and by the institution where the work was carried out. Abstracts of oral or poster presentations are not considered to constitute previous publication. Presentation of material in preliminary communications normally will not preclude publication of a full paper in *Archives*, provided that the full paper contains additional information that justifies its publication and does not repeat the presentation of the same data that supported the preliminary communication. The manuscript should be accompanied by copies of all preliminary communications and of all relevant manuscripts that are in press or under editorial consideration by another journal. Authors must verify the wording of any cited personal communication with the persons who supplied the information and obtain approval for the use of their names in connection with the quoted information or for the citation of unpublished work; written evidence of such approval should accompany the manuscript. All material published in *Archives* represents the opinions of the authors and should not be construed to reflect the opinions of the Editors or the Publisher.

Authors should suggest competent reviewers in their field and may also suggest individuals whom they wish to have excluded from the review process. The corresponding author will receive a decision letter from the Executive Editor. Revised manuscripts and correspondence concerning such manuscripts should be sent to the Executive Editor at the address indicated on the decision letter. Revised manuscripts should be accompanied by a copy of the unrevised version.

Many acceptable papers require minor revision or condensation. It is in the mutual interest of both the authors and the journal that amended manuscripts be returned promptly. A revised paper will retain its original date of receipt only if it is received by the Executive Editor within 2 months of the date of return to the author.

Authors submitting a manuscript do so on the understanding that if it is accepted for publication, copyright in the article, including the right to reproduce the article in all forms and media, shall be assigned exclusively to the Publisher. The Publisher will not refuse any reasonable request by the author for permission to reproduce any of his or her contributions to the journal.

Communications offer a means of early publication of work of such importance that rapid release is warranted. Normally they should not exceed 15 manuscript pages in length (including text, bibliography, tables, and figures). The review and printing of such papers will be expedited to provide earliest possible publication.

Form of Manuscript. Manuscripts should be typewritten and double-spaced throughout on one side of 8.5 × 11-in. white paper, with 1-in. margins on all sides. All pages should be numbered consecutively.

Subject Areas. Authors should specify on page 1 of the manuscript the Subject Area of the article submitted. See the back cover for the listing of the Subject Areas.

Page 1 should contain the article title, author(s), affiliation(s), a short running title (abbreviated form of title) of less than 65 characters including letters and spaces, the appropriate subject category for listing in

¹ An extended Instructions to Authors is published in the January issue of *Archives of Biochemistry and Biophysics*. Reprints are available from the Editorial Office upon request. Authors should consult the extended Instructions for details on nomenclature, IUPAC-IUB rules and recommendations, and accepted abbreviations.

the Table of Contents, suggestions for index list entries, and the name and complete mailing address (and telephone number if possible) of the person to whom correspondence should be sent.

Page 2 should contain a short abstract of 50–250 words.

Editorial style should conform to the *Handbook for Authors* (American Chemical Society).

Footnotes to the text should be identified by superscript Arabic numerals and should be typed double-spaced on a separate sheet; footnotes to tables should be identified by superscript lowercase italic letters (^a, ^b, etc.) and placed at the bottom of the table.

Tables should be numbered with Roman numerals and cited consecutively in the text. Each table should be titled and typed double-spaced on a separate sheet. Units must be clearly indicated for each of the entries in the table.

Authors can submit complex tables and mathematical material as camera-ready copy. In this way, they are spared multiple, tedious proofreadings and the chance of error is reduced. Tables submitted as camera-ready copy should be typed single spaced whenever possible and preferably submitted as 5 × 7-in. glossy prints.

Figures should be cited consecutively in the text by Arabic numerals. Legends should be typed double-spaced on a separate sheet. All figures and illustrations are to be submitted in such form as to permit photographic reproduction without retouching or redrawing. Line drawings should be professionally drafted and no larger than 8.5 × 11 in. Letters and numbers should be at least $\frac{3}{16}$ in. (4 mm) in height (Leroy lettering size 200). Glossy prints of figures properly prepared are acceptable. Illustrations in color can be accepted only if the authors defray the cost.

References should be cited in the text by an Arabic numeral in parentheses and listed at the end of the paper in numerical order typed double-spaced on a separate sheet. Abbreviations of journal titles should conform to those of *Chemical Abstracts Service Source Index*, 1980. Please note the following examples.

1. JONES, J. B., DILWORTH, G. L., AND STADTMAN, T. C. (1979) *Arch. Biochem. Biophys.* **195**, 255–260.
2. METZLER, D. E. (1977) *Biochemistry: The Chemical Reaction of Living Cells*, p. 298, Academic Press, New York.
3. HARRINGTON, W. F. (1979) in *The Proteins* (Neurath, H., and Hill, R. L., eds.), Vol. 4, pp. 246–409, Academic Press, New York.

Miniprint supplements are an effective way of presenting supportive data. They are printed from plates made by photographic reduction from typed pages provided by the author. Types of data that have been published as miniprint supplements include analyses relevant to studies of amino acid or polynucleotide sequences, details of chemical syntheses, preparation of enzymes, extended statistical or mathematical discussions, and X-ray diffraction data. The miniprint supplement is published in the journal, immediately following the parent paper, and is included in the reprints. Since the miniprint supplement is produced from camera-ready copy supplied by the authors with no redaction or editorial changes it is important that the copy be letter perfect and conform to the style of the journal. *Authors will not be permitted to make changes to the miniprint supplement at the proof stage. Any changes necessary in the proof must be made as a typeset "Note added in proof."*

Proofs will be sent to the author, with a reprint order form. Authors will be charged for extensive alterations.

Reprints. Fifty reprints of each article will be provided free of charge. Additional reprints may be purchased.
